Ministry of Irrigation
and Water Development
Northern Region Water
Board

Date

2008-2010

Sogreah services

- ▶ Feasibility Study covering all issues (technical, environmental, social, financial) and taking into account all potential alternatives
- ▶ Preliminary Design of the alternative selected for each town

Background

The towns of Mzuzu (150,000 inhab.) and Mzimba (20,000 inhab.) are currently supplied with drinking water by resources that are approaching their maximum production capacity.

New resources must be mobilized for both towns in the short term.

Description of project

The project consists in developing a new system for each town comprising a dam, a water transmission pipeline and a water treatment plant.

Multi-purpose dam options (for irrigation, hydro-power generation, etc. in addition to water supply) must be considered in priority.
