

# Renault Site of Titu-Boteni

## Environmental Audit of a former military site

### Country

Romania

### Client

Renault Technologie Roumanie

### Date

2007

### Sogreah Magelis' Services

- ▶ Due Diligence Audit
- ▶ Site Investigations
- ▶ Recommendation on Remediation works

Renault Technologie Roumanie (RTR) acquired a former air base of 260 ha in Titu in order to create a research center.

Within this framework, Renault Technologie Roumanie entrusted to Sogreah Magelis and Sogreah Enviro-Asist the environmental audit of the site in order to determine the pollution level, generated by the former activities of the site.

Sogreah Magelis and Sogreah Enviro-Asist satisfied the requirements of the customer and of the Romanian administration.

The historical and documentary analysis was followed by site investigations on the soil and groundwater quality to define the polluted areas.

This study led to recommendations on remediation work in order to allow reception of new activities without any health risks for the future users.
